                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11-OCT-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drmanac RT, Liu C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or treat disease states involving to restore normal activity of (II) or treat disease states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 20; SEQ ID No 58528; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB; AAS92356.

cc seminal vesicle hyperplasia in transgenic mice overexpressing B7-L CC polypeptide. Hence modulators of (1) are useful for the treatment of CC cancer including seminal vesicle cancer, lung, brain, breast, ovarian, CC cancer including seminal vesicle cancer, lung, brain, breast, ovarian, CC cancer and cancers of haematopoletic system. B7-L polypeptide cCC pathway can be manipulated to regulate cytotoxic T-lymphocyte response CC in allograft transplantation, graft versus host diseases, T-cell CC diseases involving chronic immune cytosymptoms associated with CC molecules are useful for alleviating the symptoms associated with CC diseases involving chronic immune cell dysfunction or to treat CC arthritis, multiple sclerosis, diabetes, immune thrombocytopenic CC arthritis, multiple sclerosis, diabetes, immune thrombocytopenic CC inflammatory bowel disease (Crohn's disease and ulcerative colitis), CC Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They CC Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They can also useful as immunosuppressive agents for bone marrow and organ are also useful for diseases are useful for alleviation of toxic proliferation, including arteriosclerosis and vascular restenosis. CC Interestive of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, and for extreatment of allergy, asthma and hypersensitivity reactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse; B7-like protein; B7-L; antiinfertility; gynaecological; antitumour; cytostatic; immunosuppressive; antiarthritic; antirheumatic; antiinflammatory; dermatological; antipsoriatic; neuroprotective; antidiabetic; haemostatic; antibacterial; virucide; tumour; cancer; antiastimmatic; nephrotropic; antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; endocrinopathy; lymphoproliferative disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, conditions including reproductive disorders (e.g. infertility, and miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are extracellular domains and other regulators of tumours. (I) plays a role in useful for enhancing the immune response to tumours. (I) plays a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-JUN-2000; 2000US-214512P

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mouse B7-like protein, B7-L_m2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), inflammatory bowel disease (Crohn's disease and diabetes mellitus. They grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They grave's disease, Hashimoto's thyroiditis and diabetes mellitus are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases involving abnormal cell proliferation, including arterlosclerosis and vascular restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, and for dephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigold), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of mouse B7-L_m2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      testicular cancer and cancers of haematopoletic system. B7-L polypeptic pathway can be manipulated to regulate cytotoxic T-lymphocyte response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of polypeptide. Seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 molecules are useful for alleviating the symptoms associated with

nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coellac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the amino acid sequence of mouse B7-L_m3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease, T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell disfunction or to treat
                                                                                                                                                                                       proliferation, including arteriosclerosis and vascular rescenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for
                                                                                                                                                                                                                                                                                                                                             autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, immune thrombocytopenic purpura and psoritasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and ulcerative colitis), Grave's disease, Hashimoto's thyroiditis and diabetes mellitus. They
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptide, polynucleotide encoding it and antibody against (i) a useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                        treatment of allergy, asthma and hypersensitivity reactions
                                                                                                                                                                                                                                                                                                are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated B7-like (B7-L) polypeptide (I).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 13; Fig 7; 135pp; English.

The present invention describes a material for extracorporeal circulation which is made from a water-insoluble carrier immobilized with a protein having the sequence shown here. The materials of the invention, including adsorbents, are for extracorporeal circulation, which are applicable in the selective elimination of diabetic complication factors from a body
                                                                                                                                 Material for extracorporeal circulation, applicable in selective elimination of diabetic complication factors such as carbonyl stress products caused by abnormally promoted carbonyl stress from excretory dysfunction in vascular lesions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a method of ameliorating neurovascular stress, and decreasing cerebral vasoconstriction in subject suffering from the composition of acute cerebral amyloid angiopathy, comprising administering an inhibitor (I) of receptor for advanced glycation end product (RAGE). CC (I) inhibits transcytosis of amyloid beta peptides across blood-brain cerebral blood flow. (I) is useful for treating amyloid angiopathy in a crebral blood flow. (I) is useful for treating amyloid angiopathy in a cerebral (preferably, transgenic mouse overexpressing mutant human amyloid corenbral amyloid angiopathy, preferably, Alzheimer's disease, and for cerebral amyloid angiopathy, preferably, Alzheimer's disease, and for cerebral amyloid angiopathy, preferably, Alzheimer's disease, and for conserved the neurovascular stress is caused by Alzheimer's comprising cerebral amyloid angiopathy conserved conserved amino acid sequence of human receptor for advanced glycation end conserved c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to detecting receptor for advanced glycated endproducts (RAGE) modulators comprises determining the amount of RAGE protein or its fragment bound to the pre-adsorbed ligand by measuring the amount of anti-RAGE antibody bound to the solid surface. The method is modulate RAGE in the compounds are useful for rapid, high-throughput identification of compounds that and symptoms of diabetic late complications, amyloidoses, Alzheimer's disease, cancer, inflammation, kidney failure, systemic lupus nephritis or inflammatory lupus nephritis, erectile dysfunction and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW81030;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAW81030 standard; Protein; 1496 AA
                                                                                                                                                                                                                                                                                                                                                          melanoma, lung carrinoma and rhabdomyosarcoma cells, foetal brain, foetal heart and human placenta. The invention also provides T cell epitopes (see AAW80131-54) from McS0, including cytotoxic and helper T cell epitopes, antibodies that specifically bind to McS0 or an McS0 T cell epitopes, recombinant vectors, and antigen presenting cells. Methods are provided for identifying an McS0 melanoma associated antigen in an individual and for identifying an immune response against an McS0 melanoma associated antigen, as well as methods of stimulating T lymphocytes that are reactive against cancer cells expressing McS0 and for treating an individual having cancer cells that express McS0. The products and methods can be used for the defertion. Treatment and prevention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MG50; melanoma gene-50; melanoma associated antigen; human;

            The present sequence is the protein encoded by PRG2 gene, that is upregulated in response to induction of p53 activity in human colon cancer EBI cells. This sequence is the human homologue (hPxn) of Drosophila peroxidasin gene dPxn, that is expressed in heart, placenta, spleen, ovary and intestines. PRG2 is involved in p53-mediated growth suppression pathways and plays a role in redox regulation. It is a suppression pathways and plays a role in redox regulation. It is a haem-peroxidase that increases the intracellular content of reactive oxygen species (ROS). They are potential targets of p53 regulatory activity and are useful for modulation of cellular proliferation. PRG2 agene is localised to human chromosome 2p24.3. The PRG target molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human p53 target molecule, PRG2 protein.

The gene/cDNA may be used for gene therapy, to restore a gene function downstream of p53, that cannot be activated in the p53-deficient tumour cell. Antibodies can be used as inducers of cell cycle arrest and/or apoptosis. The DNA sequences can be used to generate 'knockout' animals as a model of cancer susceptibility.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -i- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
-i- TISSUE SPECIFICITY: RESTRICTED TO THE NERVOUS SYSTEM.
-i- DEVELOPMENTAL STAGE: INCREASES DURING DEVELOPMENT FROM VERY LOW
LEVELS AT EMBRYONIC DAY 10 AND IS MOST ABUNDANT AFTER HATCHING.
-i- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. IGLON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Wilson D.J.A., Kim D.-S., Clarke G.A., Marshall-Clarke S., Moss D.J. "A family of glycoproteins (GP55), which inhibit neurite ourgrowth,

-i- EUNCTION: IMPLICATED AS A TUMOR SUPPRESSOR GENE.

-i- SUBCELLULAR LOCATION: Type I membrane protein.

-i- TISSUE SPECIFICITY: FOUND IN AXONS OF THE CENTRAL AND PERIPHERAL NERVOUS SYSTEM AND IN DIFFERENTIATED CELL TYPES OF THE INTESTINE.

-i- DISEASE: COLORECTAL TUMORS THAT LOST THEIR CAPACITY TO DIFFERENTIATE INTO MUCUS PRODUCING CELLS UNIFORMLY LACK DCC EXPRESSION. INACTIVATION OF DCC DUE TO ALLELIC DELETION AND/OR POINT MUTATIONS MAY CAUSE BOTH LYMPHATIC AND HEMATOGENOUS METASTASIS OF OESOPHAGEAL SQUAMOUS CELL CARCINOMAS.

-i- SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. DCC
